MOTORTRONICS
Solid State AC Motor Control

Manual Addendum for VMX-B Configured Softstart Packages

For use with wiring diagram # 93-3825 Rev 1 (CB/FS), or 93-3825A Rev 1 (MLO), and VMX user manual.

Introduction: The VMX-B is a configured enclosed softstart, available as a Combination (with C/B or Fused disconnect) package, or as an MLO (Main Lug Only) package, intended for use in Industrial, Commercial, Agricultural, or Infrastructure applications.

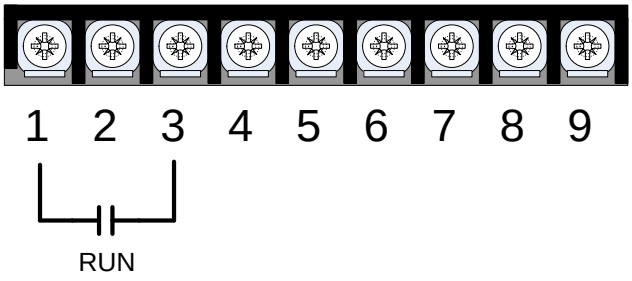
Line Voltage:
By default units are set-up for 460VAC line power, but can be adjusted to operate on 230VAC or 208VAC at the reduced HP rating. To adjust the operating voltage simply move wire #1L2B from the 480V (H4) terminal to the 230V (H3) or 208V (H2) terminal.

Power Connections:
Line Power input is connected directly to the bottom terminals of the Circuit Breaker, or line terminals on MLO (Main Lug Only) units, and the motor is connected to the lugs at the bottom of the VMX softstart.

Remote Start / Stop Control connections:
The VMX-B is set up for 2 or 3 wire remote control using dry contacts rated at 120VAC (0.1Amp).

Remote Two Wire Control:
Connect a dry (voltage free) maintained contact closure between terminals 1 and 3 of the customer terminal strip as shown here.

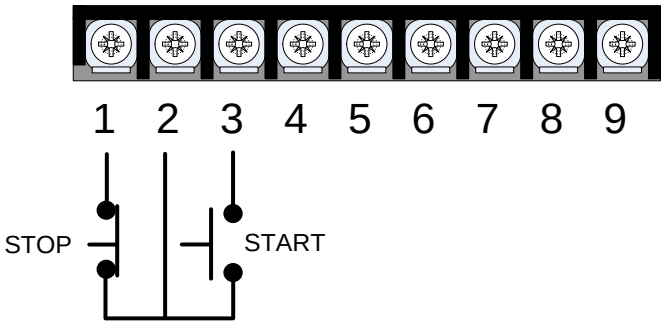
Customer Terminals TBC on TCB3000 PCB



See page 3.
TCB3000 Terminal Control Board

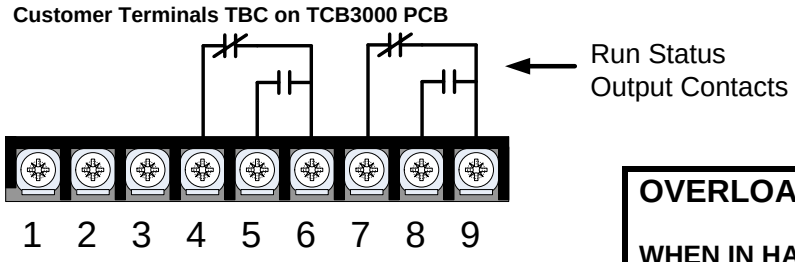
Remote Three Wire Control:
For standard 3-wire control, connect dry (voltage free) contacts for the Stop / Start buttons as shown below of the customer terminal strip. Connect the normally closed “STOP” pushbutton across terminals 1 & 2, and the normally open “START” pushbutton across terminals 2 & 3 of the customer terminal strip. **Note:** the unit can be operated in the “Local” position without any external control.

Customer Terminals TBC on TCB3000 PCB



See page 3.
TCB3000 Terminal Control Board

Run Status Output Contacts
The VMX-B unit offers 2 Form-C (N.O and N.C.) "RUN" contacts located on the customer terminal strip, terminals 4 (NC), 5 (NO), 6 (Common), and terminals 7 (NC), 8 (NO) 9 (Common). These contacts reflect a successful RUN command in "SOFT" or "X-LINE" mode, and should be used for any required "Run / Running" status outputs.



See page 3.
TCB3000 Terminal Control Board

VMX Auxiliary Contacts
(TB2 of Softstarter)

There are 3 programmable Aux contacts available on TB2 of the VMX softstart (2 form-C and 1 form-A). The function of these contacts are labeled on the wiring diagrams, but can be changed in the VMX programming. Note however, that the contacts may not function properly when operating in the X-LINE mode. (see description below).

X-LINE Operation:
VMX-B packages are supplied with a **SOFT/X-LINE** selector switch, located on the TCB3000 PCB that allows the operator to select Full Voltage operation of the motor via the bypass contactor for emergency operation when the softstart may be inoperable.

When operated in the X-LINE mode full start/stop control is maintained, and the "Run Status Output Contacts" will function correctly.

During X-LINE operation, the motor will be protected by the external Bi-Metal overload relay which must be set according to the motor FLA and the Current transformer ratio of the unit.

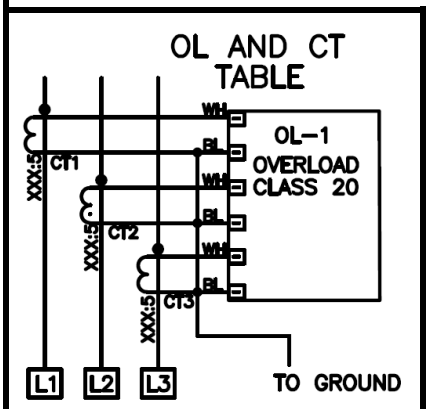
Important:

Motor FLA and Service Factor must be entered prior to a start attempt see next section on how to set Motor FLA and Service Factor parameters.

OVERLOAD RELAY OPERATION

WHEN IN HAND (H) POSITION: USER MUST RESET OL (BY PUSHING GREEN BUTTON)

WHEN IN AUTO (A) POSITION: RELAY WILL AUTOMATICALLY RESET AFTER TRIPPING



OL SET FORMULA

$$\text{OL SET} = \frac{\text{MOTOR FLA X 5}}{\text{CT RATING}}$$

NOTE: YELLOW OVERLOAD DIAL MUST BE SET IN ACCORDANCE WITH THE MOTOR "FULL LOAD AMPS" PER MOTOR NAME PLATE DATA

YELLOW OVERLOAD ADJUSTMENT DIAL

Programming Instructions

This document is intended for use with Models: VMX-B Softstart Packages

Motor FLA and Service Factor must be entered prior to start attempt

Entering Motor FLA & SF

Press Key...	Means...
	0000 — Default Display
Fn	F001 — Function #1 Selected
Read Enter	0000 — FLA value (0000 is default)
↑	0009 — Set value of ones digit (flashing)
←	0009 — Cursor Position Shift (tens digit flashing)
↑ ←	0179 — Set value of remaining FLA digits
Read Enter	End — Value Accepted (flashes once)
	F001

Use up arrow to scroll to F002 and repeat process to set Service Factor. When programming is complete press Fn key to exit programming mode.

Fn #	Function Description	Range	Default
F001	Motor Nameplate FLA	50-100% of Max Amp Rating.	None
F002	Motor Nameplate Service Factor	1.00 - 1.30 SF	1.0 SF

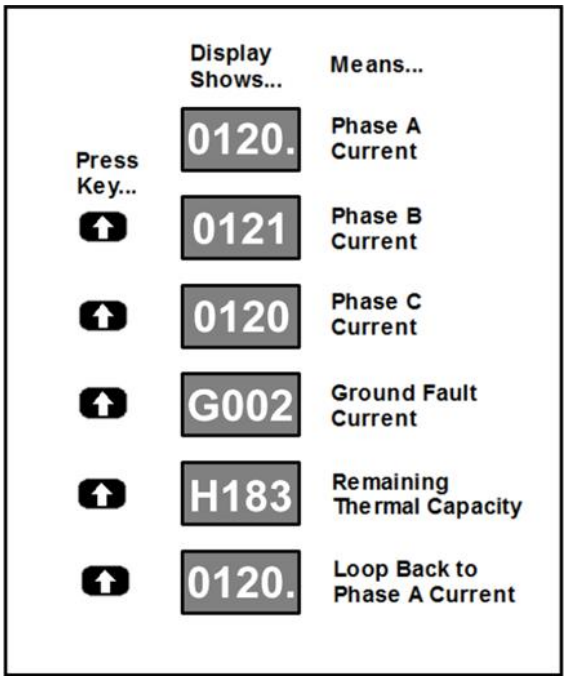
For complete parameter list see pages 6-7 of this document

For Complete Installation instructions see VMX Operation & Installation Manual

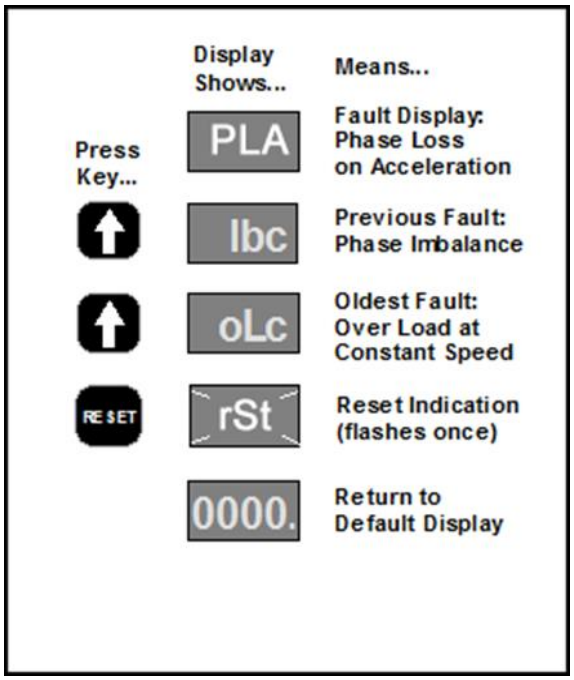
Operation and Troubleshooting

Keypad Operation

Display Mode (Default)



Fault Mode



Fault Code	Description
nFLA	No Full Load Amps set in F001
Inh	Parameter change attempted when in Run Mode or without password
N3Ph	Line Voltage Loss (no 3 phase prior to start)
Loc	Lockout Starter is in overload or duty cycle lockout
Err	Incorrect Password Entered
ocA; occ: ocd	Over Current during Acceleration; Constant speed; Deceleration
PLA; PLc; PLd*	Phase Loss during Acceleration; Constant speed; Deceleration
otA; otc; otd	Over Temperature during Acceleration; Constant speed; Deceleration
oLA; oLc; oLd	Over Load during Acceleration; Constant speed; Deceleration
SSA; SSc; SSd*	Shorted SCR during Acceleration; Constant speed; Deceleration
st	Shunt Trip during Acceleration; Constant speed; Deceleration
IbA; Ibc; Ibd	Current Imbalance during Acceleration; Constant speed; Deceleration
UcA; Ucc; Ucd	Under Current during Acceleration; Constant speed; Deceleration
ScA; Scc; Scd	Short Circuit during Acceleration; Constant speed; Deceleration
GFA; GFc; GFd	Ground Fault during Acceleration; Constant speed; Deceleration
bPA; bPc; bPd	Bypass Discrepancy during Acceleration; Constant speed; Deceleration
PtA; Ptc; Ptd*	PTC Trip during Acceleration; Constant speed; Deceleration
rtA; rtc; rtd	Rotation Trip during Acceleration; Constant speed; Deceleration

***NOTES:**

"PLd" can be caused by a Grounded delta power system. If one input leg measures ZERO volts to ground, reduce the setting of F051 to "0054" for operation on a "Grounded Delta".

"SSd" can be caused by operating without a motor connected, ensure the motor is firmly connected.

"PtA, Ptc, or Ptd" indicates that the Surge absorber is damaged; see NOTE 1 on wiring diagram.

Full Parameter List			
Parameter	**Description**	**Adjustment Range**	**Factory Setting**
F001	Motor FLA	50-100% of Max Amp Rating (less Service Factor)	0
F002	Motor Service Factor	1.00-1.30	1.00
F003	Overload Class During Start	NEMA/UL Class 5-30	10
F004	Overload Class During Run	NEMA/UL Class 5-30	10
F005	Overload Reset	0=Manual, 1=Auto, 2=Disabled	0:Manual

VMX-B Door Mounted Operators

Illuminated E-Stop Pushbutton:

- Removes control power from all circuits and VMX softstart.
- Push to activate, twist and pull to release.
- Button Lights when E-stop is pressed.

Start/Stop Pushbutton and Run Light Assembly:

- Provides Start/Stop control in "Local" mode.
- Provides "Motor Running" indication in all operating modes.

Local/Off/Remote Selector:

- Local" selects door mounted Start/Stop control.
- Remote" selects Start/Stop control from customer supplied signals at terminals 1-3 on TBC.
- Off' Turns motor off.

Power ON Light:

- Indicates presence of 120VAC control power, derived from main (L1 & L2) line voltages.

Fault Light/Reset Pushbutton:

- When lit, indicates that the unit has tripped, and requires "Reset".
- In "Soft" (normal) mode, the "trip" will be displayed on the VMX keypad (inside), and will reset upon activation of the reset pushbutton.
- In "X-line" mode, the light indicates that the X-line overload inside the panel is tripped, and must be reset manually by pressing the (green) reset key on the overload itself. Then the unit can be reset, using the pushbutton on the door.

Note: If the green reset key on the X-line overload is turned to the "A" (auto) position, the O/L relay will reset itself after the required cooldown, after that the unit can be reset by pushing the reset pushbutton without opening the enclosure door.
